JSS Audit & Program Page Redesign

Monday

1. Wireframe — IT Support Certificate Program Page

Chose the IT Support Certificate page over Cybersecurity Analyst as this week's focus, since it is the program most linked from the homepage hero and Learning Path Helper, so improving it has the highest visibility for learners landing from those entry points. The wireframe was sketched at the same two breakpoints as Week 2 (375px / 1180px) so it drops into the existing site structure without a new layout system.

- Sections blocked out: Program Hero (title, outcome one-liner, Enroll CTA), Skill Highlights, Career Outcomes, Tools & Skills List, Program Benefits, and Free Membership CTA.
- Skill Highlights and Career Outcomes were pulled up into their own dedicated blocks instead of being buried in a paragraph, since the current live page states skills and job outcomes only as plain text with no visual hierarchy.
- Enrollment CTA decision: kept a single primary "Enroll Now" button anchored directly under the hero outcome line (highest-attention position), with secondary CTAs (Free Membership) placed lower so they don't compete with the primary action.

Source file: program-wireframe.html (attached in repo/zip).

Tuesday

2. Program Page Prototype — HTML & CSS Build

Built the approved wireframe into a working prototype (program.html + program-styles.css), reusing the site's existing navy/blue/pink palette from the Week 2 homepage rebuild instead of introducing a new color system:

- Hero uses the same dark navy background and purple → pink accent gradient as the homepage hero, so the program page reads as part of the same brand instead of a standalone template.
- Reused the card and button components already defined in styles.css (rounded corner radius, shadow depth, gradient buttons) rather than writing new ones, to keep the design system consistent site wide.
- Typography kept to the existing scale (same heading/body sizes as the homepage) so the program page doesn't feel like a different site once a user clicks through from Home.

Source files: program.html, program-styles.css (attached).

Wednesday

3. CTAs, Benefit Sections & Tools/Skills List

Added the three CTAs the audit flagged as missing on program pages, plus supporting content sections:

- Enroll Now — primary, highest-contrast button in the hero, routes into the sign-up flow (same destination as the homepage "Start" fix from Week 2).
- Get Free Membership — secondary button placed inside the Program Benefits section, since that's where a visitor is deciding whether to commit, not in the hero where it would compete with Enroll.
- Program Benefits section: four short cards (Hands-on Labs, Self-Paced Access, Certificate on Completion, Career Advisor Support) so benefits are scannable instead of a paragraph of prose.
- Tools & Skills list: a tagged pill-list (e.g. Windows 10 Administration, Active Directory, Ticketing Systems, Networking Basics, Customer Support) placed directly under Skill Highlights, so employers/learners can scan exactly what's covered without opening the syllabus.

Source files: program.html, program-styles.css (updated).

Thursday

4. Responsiveness Testing

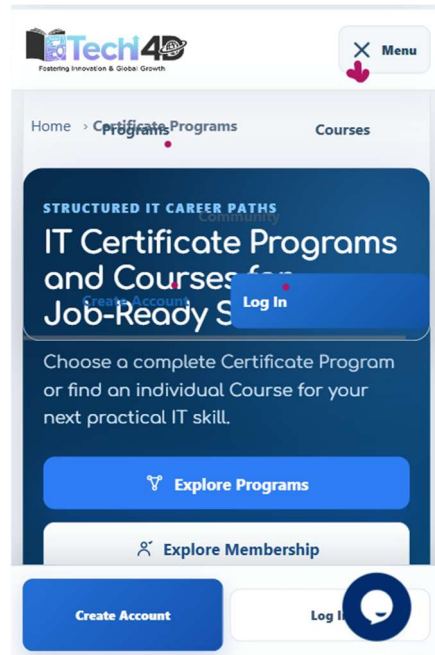

Tested the new program page at the same breakpoints used for the Week 2 homepage rebuild, using Chrome DevTools' device toolbar:

- 375px (mobile): Hero, Skill Highlights, Tools list, Benefits cards, and all three CTAs stack into a single column in the order Hero → Enroll → Skill Highlights → Tools & Skills → Career Outcomes → Benefits → Free Membership → Trainer Partnership.
- 1280px+ (desktop): Hero becomes 2-column (copy + visual), Benefit cards move into a 4-column row.
- No horizontal scroll, overlapping text, or clipped buttons found on the new program page at any of the three widths.

While testing, I also re-checked the rest of the live site on mobile as part of this week's audit pass the issues found there are documented below in Section 5, since they affect existing pages rather than the new program page.

Fix 1 — Mobile Navigation Menu Only Works on Home

Issue found: Tapping "Menu" on mobile opens an overlay that renders on top of the page content instead of replacing it, so the nav links are unreadable against the page behind them. This only looks correct on the Home page because Home's background happens to be dark; on every other page the menu is effectively unusable, so mobile users have no reliable way to get from one page to another.

Menu overlay opening on top of page content, obscuring the nav links underneath.

Fix 2 — Program Hero Image Cut Off on Mobile

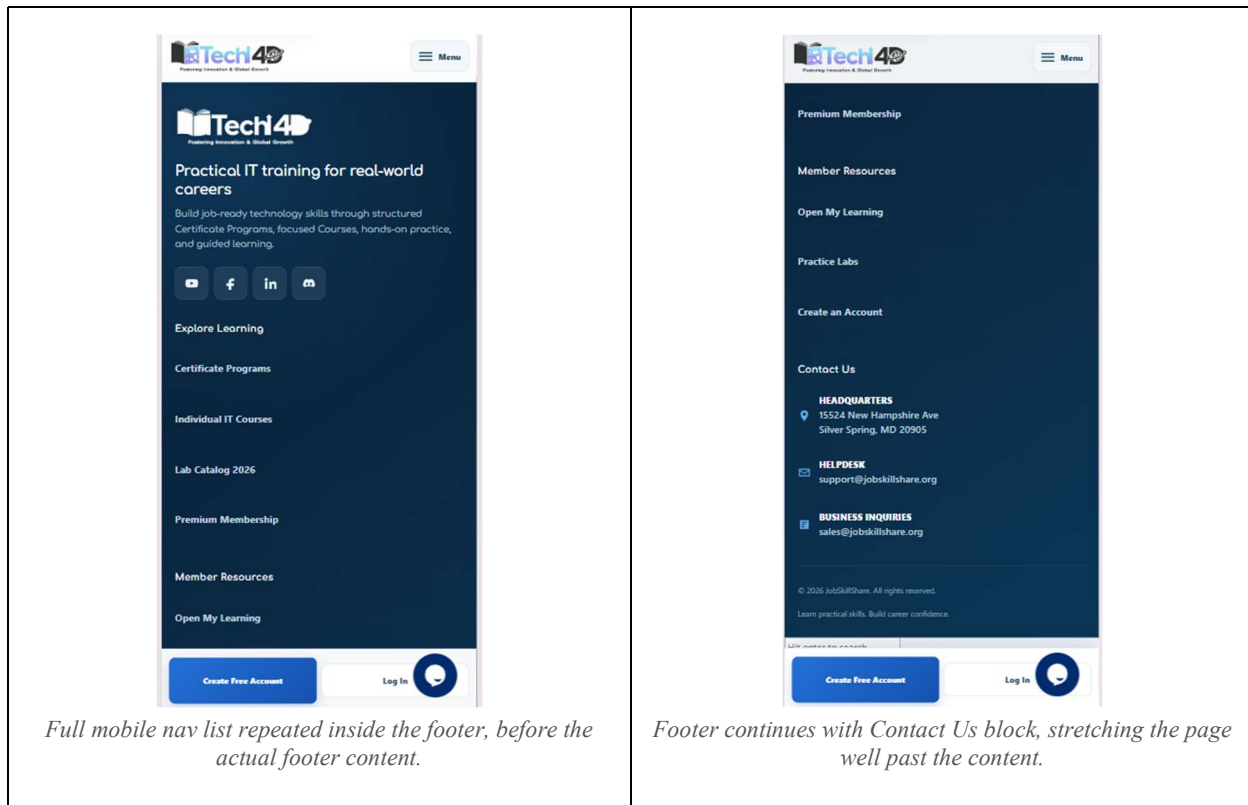

Issue found: On the existing Azure Administrator course page, the hero image and its overlaid heading are clipped by the container on mobile — both the graphic and part of the title text are cut off at the edges.

Azure course hero image and heading are cropped at the container edge on mobile.

Fix 3 — Footer Too Long on Mobile

Issue found: On mobile the footer duplicates the entire nav menu (Explore Learning, Certificate Programs, Individual IT Courses, Lab Catalog, Premium Membership, Member Resources, Open My Learning, Practice Labs, Create an Account) above the actual footer content, roughly doubling the footer's height and pushing Contact Us far below the fold.

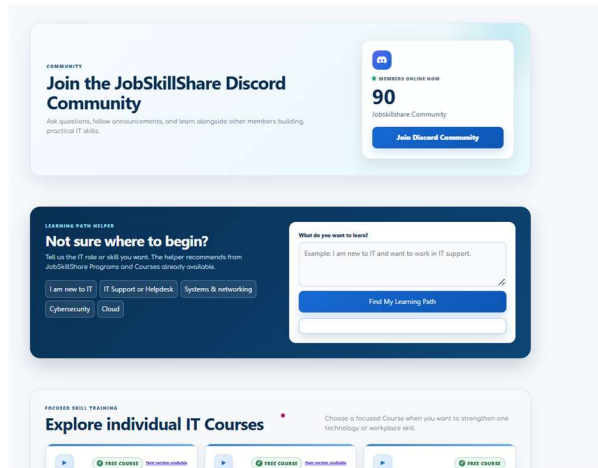

Friday

5. Site-Wide Audit: Fixes From This Week's Review

Alongside the new program page, I audited the live site again on mobile and reviewed the flagged screenshots. Each item below shows the issue found, the change made (or planned for the prototype), and a screenshot of the current state.

Fix 1 — Section Order on Programs Page

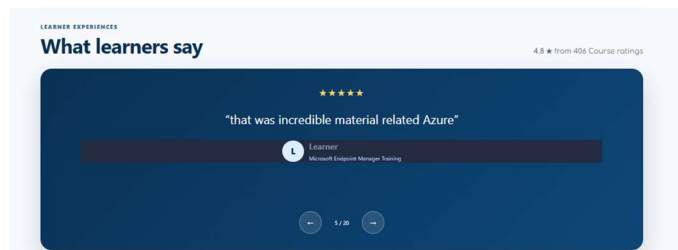

Issue found: On the Programs page, "Join Discord Community" and "Learning Path Helper" are placed above "Explore Individual IT Courses," so a visitor has to scroll past two community/utility blocks before reaching the actual course catalog they came for.

Discord Community and Learning Path Helper currently appear above Explore Individual IT Courses.

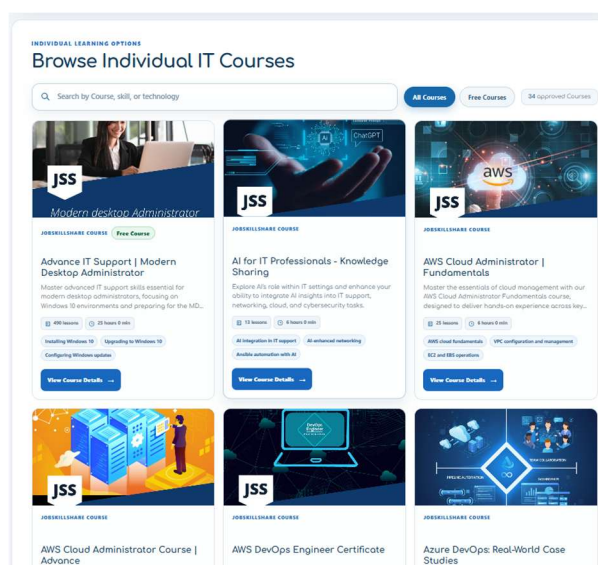

Fix 2 — Testimonials Show No Learner Name

Issue found: The "What learners say" testimonial carousel labels every quote simply "Learner" with no name, which makes the 406 course ratings feel unverifiable rather than like real learner feedback.

Testimonial card labelled only "Learner," with no name attached to the quote.

Fix 3 — Redundant Course Data on the Programs Page

Individual IT Courses grid duplicated on the Programs page with the same cards as the Courses page.

Issue found: The "Browse Individual IT Courses" grid on the Programs page shows the same course cards, in the same order, as the dedicated Courses page — so the two pages present duplicate data instead of Programs pointing to Courses.
